

Book of Knowledge

We are excited to announce the release of a new feature – Book of Knowledge (Department Resource Vault). This feature provides a centralized platform for all employees to access, share, and track documents across different departments in the company.

Agenda

Previous Practice:

- Employees had to search through desktop folders, emails, or shared drives to find required documents.
- This was time-consuming and often led to delays when urgent access to information was required.
- Project knowledge was fragmented, making it difficult for employees to gain context or reference materials when assisting with other projects or troubleshooting issues.

New Improvement:

- A centralized Book of Knowledge (Department Resource Vault) is now available. Employees can now access all required documents directly within the system, eliminating the need to search through external drives.
- Serves as a centralized knowledge hub where project-related documents, references, and resources are organized and stored.
- Enables employees to quickly refer to existing documentation for faster knowledge transfer, effective collaboration, and improved continuity

Key Highlights

1. Department Resource Vault

- Displays all departments in the organization with dedicated cards (e.g., IT, HR, Marketing, Accounts, Design).
- Allows employees to easily navigate to department-specific resources.

Department Resource Vault

2. Department Document Repository

- Each department has its own document library.
- Document cards display:
 - Title of document
 - Upload date & time
 - Uploaded by
 - Created by
 - Number of views
- Search bar provided for quick access to documents.

3. Document Viewer

- Employees can now view documents directly within the system.
- No need to download files – documents open in a built-in viewer with clean formatting.

4. Document Viewer Insights

- Track who has viewed a document, along with time and date of access.
- Provides transparency and accountability in document usage.

5. Document Upload with Permissions

- A new **Upload Option** is introduced.
- Upload access is controlled based on **permissions**.
- Only employees with the required permissions can upload documents to the respective department repository. Ensures secure and controlled document contribution.

- Additionally, **Department Creation** is also permission-based. If a user has the necessary permission, they can create a new department (e.g., a dedicated "Book of Knowledge" repository) and store documents within it. This ensures that both document uploads and repository creation remain structured, secure, and manageable.

Benefits

- Centralized Knowledge Sharing – Each department has a structured knowledge hub.
- Time-Saving – Quick access to necessary resources through search and categorization.
- Collaboration – Encourages sharing and collective learning.
- Digital Book of Knowledge – Acts as a single source of truth for the organization.

Summary

The Book of Knowledge ensures that employees can easily find, view, and track important documents. With department-specific repositories, built-in viewing, and detailed access history, this release improves collaboration, transparency, and efficiency across the organization.

Release Note – Enhanced Leave Management

We are pleased to announce major enhancements in the Leave Management System. These improvements focus on simplifying leave application and providing more flexibility for employees.

Agenda

Previous Practice:

- Employees had to select leave dates manually, making long leave applications slightly tedious.
- Full-day and half-day leaves had to be applied separately, leading to multiple requests and confusion in records.

New Improvement:

- Employees can now drag and drop across the calendar to select leave dates easily.
- Full-day and half-day leaves can be combined in one application (e.g., 1.5 days leave request).
- The system automatically calculates total leave days, including half-days, with accuracy.

Key Highlights

1. Drag-and-Drop Leave Selection

- Employees can now easily select their leave dates using a drag-and-drop feature on the calendar.
- This provides a smooth and user-friendly experience for applying multiple days of leave.

2. Merged Leave Application (Full Day & Half Day)

- Previously, full-day and half-day leaves were submitted separately.
- With the new update, employees can now combine them in a single leave request.
- Example: An employee can now apply for 1.5 days of leave in a single request.

3. Improved Leave Calculation

- The system automatically calculates the total leave days, including fractional (half-day) leaves.
- Ensures accuracy and reduces manual errors in leave balance tracking.

Benefits

- Seamless leave request experience with drag-and-drop functionality.
- Flexibility in combining full-day and half-day leaves in one application.
- Transparent and accurate leave calculation for employees and HR.
- Time-saving and error-free leave management.

Summary

The enhanced Leave Management System empowers employees with a smoother, more flexible way to request leaves. By introducing drag-and-drop selection and merged leave applications, this release ensures better accuracy, ease of use, and efficiency in managing employee leave requests.
